Definitions:

Marketings - Slaughter of Manitoba-origin livestock in Manitoba + Exports of livestock to other provinces and countries - Imports of livestock from other provinces and countries + livestock custom-killed on Manitoba farms.

Production - Slaughter of Manitoba-origin livestock in Manitoba + Exports of livestock to other provinces and countries - Imports of livestock from other provinces and countries + livestock custom-killed on Manitoba farms +/- change in on-farm livestock inventory from January 1 - January 1.

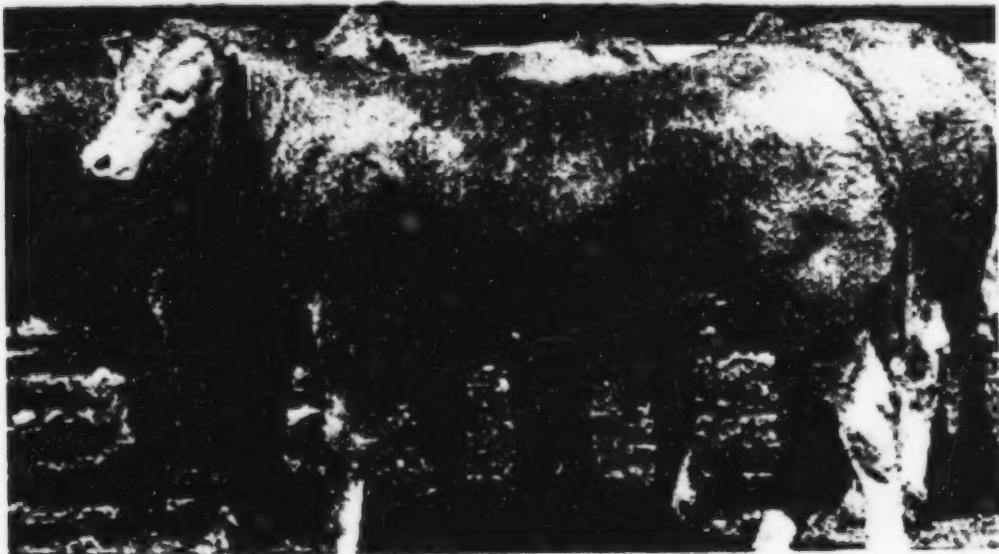

Farm Cash Receipts - Marketings in calendar year x average farm gate price (cash income) + Direct program payments.

Value of Production - Livestock production as defined above x average farm gate price.

Exports - The data may exclude Manitoba product marketed through companies in other provinces and subsequently exported or may include product from other provinces exported by Manitoba companies e.g. pork shipped from Manitoba plants to plants in Ontario and Quebec for further processing and export.

Imports - The data may exclude imported product sold in Manitoba by companies from other provinces e.g. New Zealand lamb imported by a national company with its head office in Calgary, but sold to Manitoba consumers, may be included with Alberta imports.

CATTLE AND BEEF SECTOR

CATTLE AND BEEF SECTOR PROFILE

Production:

Manitoba has Canada's third largest beef cow herd, after Alberta and Saskatchewan, with 12.2 percent of the nation's beef cows and more than 1.4 percent of total North American beef cows in 1999. Beef cow numbers in Manitoba increased fairly steadily at an average annual rate of about two percent from 1987 until 1992. Cow numbers then rose by an annual average rate of almost six percent to 1997. According to Statistics Canada, Manitoba's beef cow herd declined by one percent in both 1998 and 1999. In 1999, Manitoba's 10,920 beef cattle producers marketed almost 537,000 head for slaughter or sale out of the province. Commercial marketings were up by 31,000 head from the 1998 level, partly due to more animals being kept on farms for further feeding and sale in early 1999 and partly due to more calves being sold in fall 1999 in response to high calf prices. The value of cattle produced (including a decrease in inventory) in 1999 was more than \$444 million, about one-sixth of the total value of agricultural production in the province. Over 97 percent of commercial beef cattle operations were cow-calf with many producers retaining and/or buying calves for further feeding to be sold as "stockers", "short-keeps" or for slaughter. The remaining 3 percent of commercial operations were feedlots, the largest of which had a capacity of 6,500 head. The beef cattle industry used close to \$130 million of feed in 1999.

Marketings and Exports:

As Manitoba's cattle slaughter industry has declined from a peak of 581,000 head in 1976 to 19,600 head in 1999, most of the beef cattle produced in Manitoba have to be sold out of the province. In 1999, almost 160,000 Manitoba slaughter cattle and 10,000 feeder cattle, valued at \$176.8 million, were exported to the U.S., while a net 27,000 slaughter cattle and an estimated net 320,000 feeder cattle and calves were sold mainly to Alberta and Ontario.

Beef Processing:

Two small federally-inspected plants slaughtered about 7,200 cattle in 1999, while over 12,400 head were killed in 26 provincially-inspected plants in Manitoba. Beef production was estimated at 13.9 million lb. (carcass weight) valued at \$20 million. Beef and beef products valued at \$6.5 million were exported in 1999 with most of the exports going to the U.S.A. Much of the beef consumed in Manitoba comes from Alberta or the United States. Beef valued at \$12.3 million and hides valued at \$17.0 million were imported from other countries in 1999.

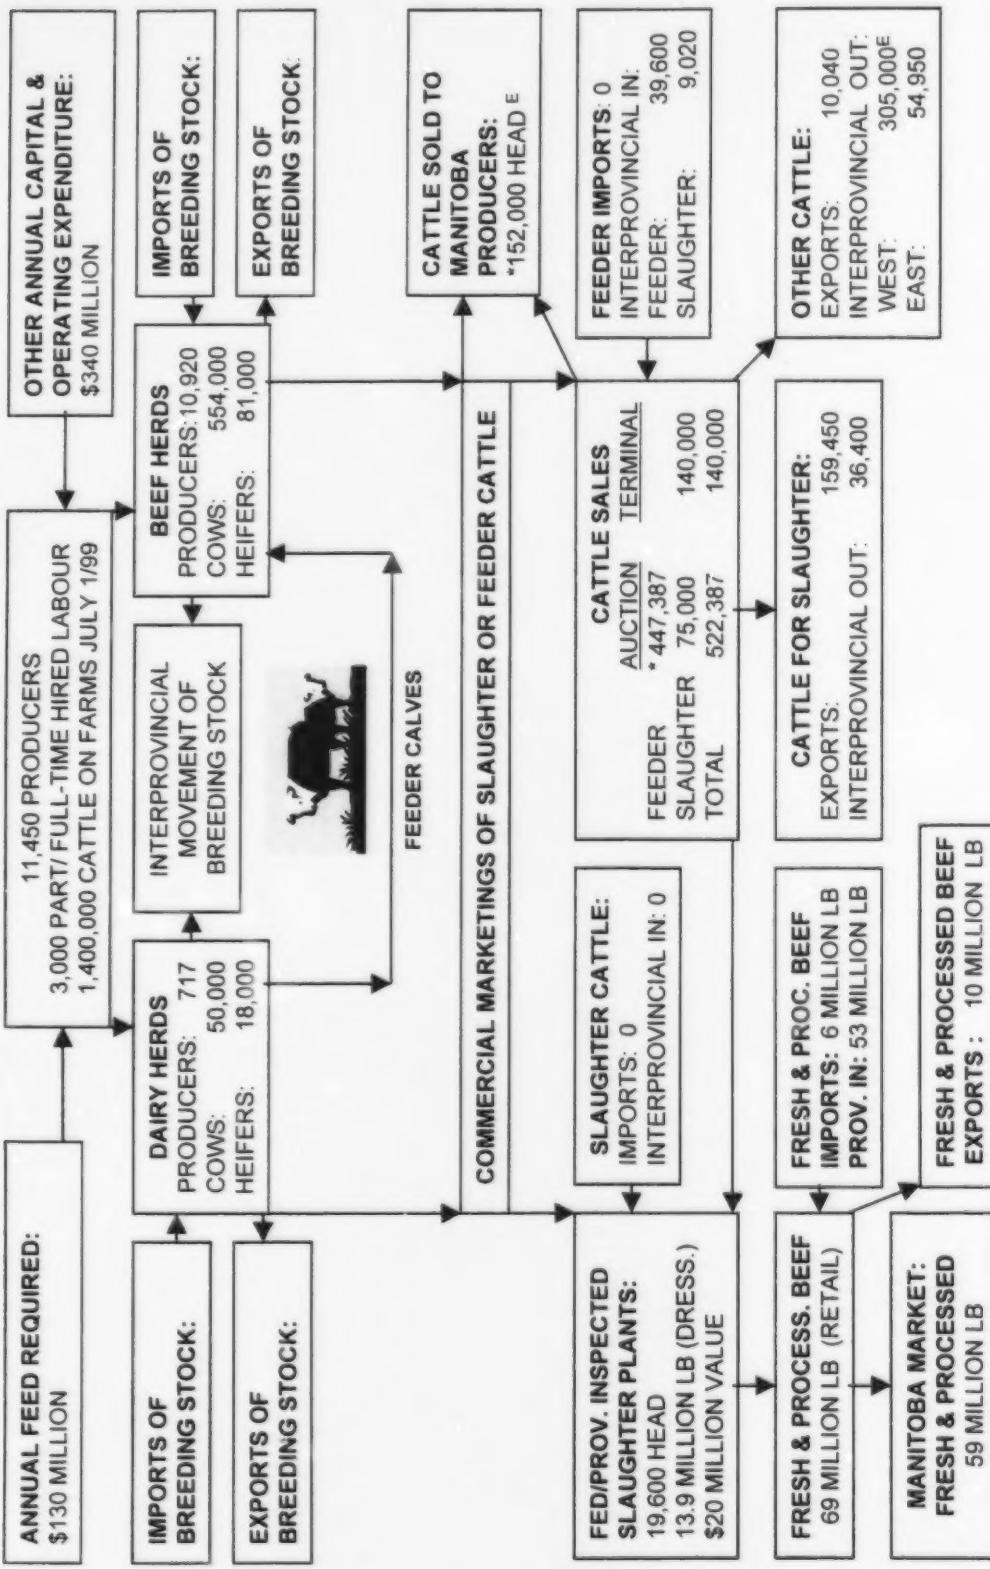

Potential:

Manitoba has the potential to significantly increase the number of cattle fed to slaughter weight in the province. Less than one third of the calves produced are fed to slaughter weight, the remainder being sold as calves, as stockers or as heavy feeders.

HOG AND PORK SECTOR

HOG AND PORK SECTOR PROFILE

Production:

Manitoba is Canada's third largest hog-producing province, after Quebec and Ontario, with 20.7 percent of national production and almost four percent of total North American production in 1999. Hog production in the province has increased more than fivefold from 1975 to 1999. In the past four years, the average annual rate of increase was 12 percent.

In 1999, Manitoba's 1,630 hog operations produced 4.75 million hogs (including an inventory reduction of 132,200 head), an increase of 17 percent from 1998. Hog prices began to rise in early 1999 from the significant drop in December, 1998 and, for the year, averaged three percent above the 1998 level. The value of hogs produced increased by 13 percent to \$476 million in 1999. This was about 16 percent of the total value of agricultural production in the province. About 13 percent of commercial hog operations produce weanlings only, 40 percent are farrow to finish and 47 percent are feeder operations. The hog industry used \$247 million of feed in 1999.

The quality of Manitoba hogs is one of the highest in Canada. The average hog Index in 1999 was 109.8 compared to 108.8 in 1998.

Hog Marketings:

A flexible marketing system for hogs was introduced in Manitoba on July 1, 1996. Hog producers have the option to market hogs to be slaughtered in the province either through brokers, such as Manitoba Pork Marketing Coop, Inc., or directly to processing plants. Hog marketings totalled almost 4.89 million head in 1999, of which over 2.33 million head were sold out of the province. Over 0.91 million slaughter hogs, about 0.02 million breeding gilts and 1.35 million weanlings were exported directly to the U.S. by hog producers and brokers. Less than 0.05 million hogs were sold to Ontario and Quebec in 1999, triple the 1998 level, but well below the levels in 1995 and 1996. Improved demand for hogs by expanding local pork processors led to 2.57 million Manitoba hogs being killed in Canadian plants in 1999, up by 14 percent from 1998.

Pork Processing:

Maple Leaf Pork began operation of a new state-of-the-art hog slaughter plant in Brandon on September 7, 1999. The plant has a capacity of 45,000 head per week for one shift. The company closed the slaughter line in its Winnipeg plant in mid-November. Jack Forgan Meats of Winnipeg ceased operation in 1998. Since then, Best Brand Meats have operated the hog slaughter plant. Expanded hog slaughter levels at J.M. Schneider

and Springhill Farms also contributed to a new record provincial slaughter level in 1999. The four major and two minor federally-inspected plants and 27 provincially-inspected plants in Manitoba killed over 3.07 million hogs in 1999, including 515,000 head from Alberta, Saskatchewan and Ontario. This was nine percent above the 1998 level. The average carcass weight of Manitoba hogs continued to increase in 1999 to 89.3 kg (equivalent to about 112 kg or 250 lb of live hog). An estimated 275 million kg of pork (carcass weight) was produced with a total wholesale value of close to \$750 million.

Trade:

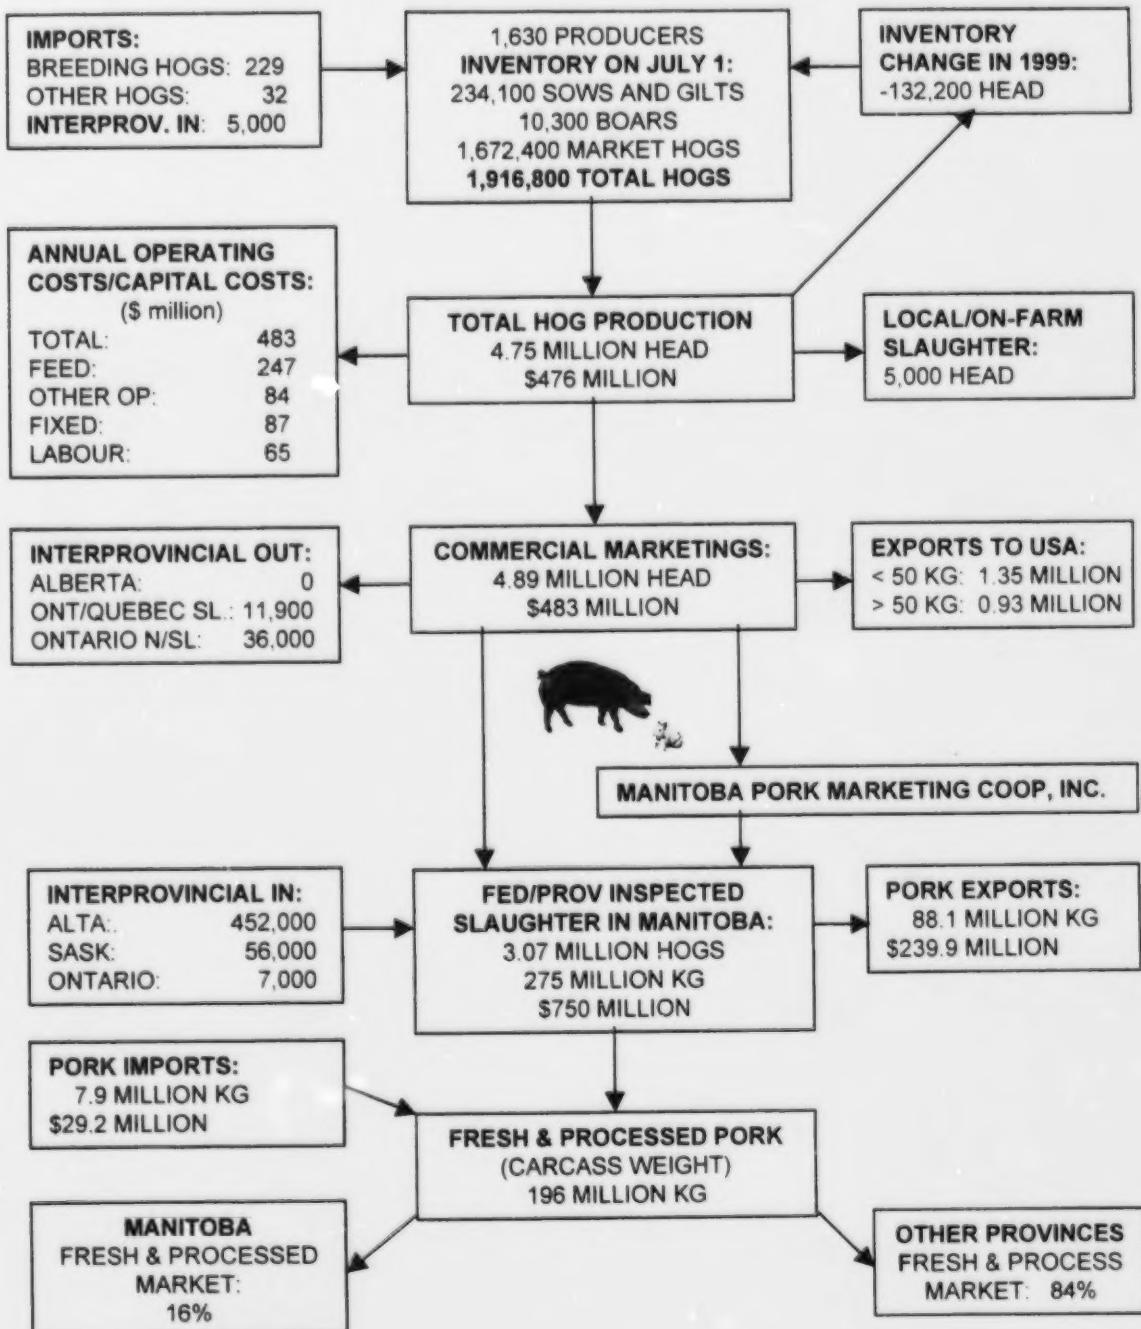

Manitoba hogs were shipped to 23 states in 1999 compared to 21 states a year earlier. Most of the slaughter hogs went to plants in South Dakota, Iowa, Wisconsin and North Dakota, while most weanlings were sold to feeder operations located in Iowa, Minnesota, Nebraska and South Dakota.

As Manitobans only consumed about 11 percent of the total pork produced in the province and the equivalent of only nine percent of all Manitoba hogs/pork marketed in 1999, most of the pork produced in Manitoba has to be sold to other provinces or countries. It appears that 60 percent (165 million kg) of pork produced by Manitoba plants in 1999 was shipped to other provinces, such as Ontario. Over 88 million kg of Manitoba pork and pork products, valued at a record \$239.9 million, (not including pork shipped to plants in Ontario and Quebec and subsequently exported) were sold directly to 23 countries in 1999 with most exports going to the U.S. (\$128 million) and Japan (\$ 97 million).

SHEEP AND LAMB SECTOR

SHEEP AND LAMB SECTOR PROFILE

Production:

Although much smaller than the cattle and hog industries, Manitoba's sheep and lamb industry is the sixth largest in Canada, producing four-six percent of national lamb production annually and 0.4 percent of total North American production in 1999. Lamb production in Manitoba has been increasing fairly steadily since 1987 and is likely to expand further during the current period of profitable prices. In 1999, Manitoba's 555 operators produced an estimated 37,500 lambs, an increase of nine percent from the 1998 level. The value of Manitoba lambs produced in 1999 was about \$3.0 million, almost 0.1 percent of the total value of agricultural production in the province. Manitoba farm cash receipts from sheep and lambs sold in 1999, including the value added to imported lambs, was \$11.3 million, up by nine percent from 1998.

Marketings and Trade:

The Manitoba lamb/sheep feedlot industry is actually much larger than lamb production in the province. In 1999, about 68,000 sheep and lambs were brought into Manitoba from British Columbia, Saskatchewan, Alberta and the U.S. Many of these animals were fed for various lengths of time in the province before being shipped to Ontario, Quebec or the United States for sale and slaughter. About 46,000 sheep and lambs were sold in Ontario and Quebec and close to 4,000 head went to Saskatchewan and Alberta. In 1999, 37,700 sheep and lambs were exported to the United States.

Lamb Slaughter:

Provincially-inspected plants in Manitoba slaughtered over 2,112 lambs in 1999, either for sale to local retailers or on a custom-kill basis. About 6,000 lambs were killed on farms for/by customers in 1999. Most of the lamb consumed in Manitoba comes from New Zealand or Alberta.

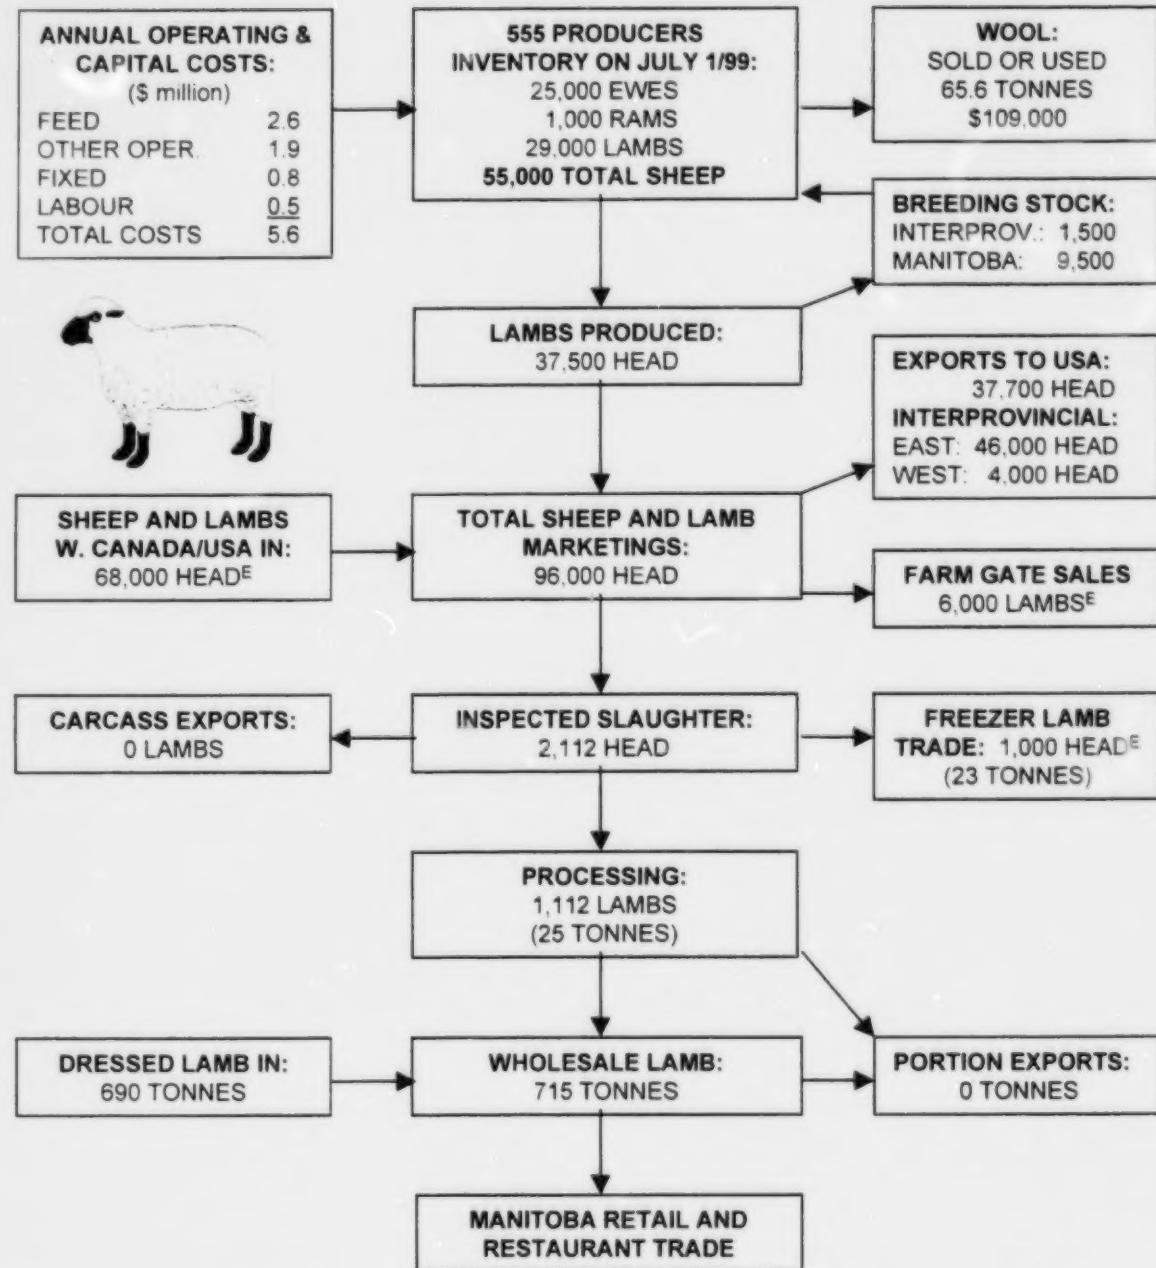

Potential:

Manitoba has the potential to continue to increase sheep/lamb production and processing to supply domestic markets as long as the product is competitive with imports.

DAIRY SECTOR

DAIRY SECTOR PROFILE

Production:

Manitoba has Canada's fifth largest dairy cow herd with 4.3 percent of the nation's dairy cows and 0.5 percent of total North American dairy cows in 1999. According to Statistics Canada, total dairy cow numbers in Manitoba have declined fairly steadily over the past twenty-three years from 93,000 head in July, 1977 to 50,000 head in July, 1999, an average decrease of two percent a year. The actual number of dairy cows producing milk under quota rose by two percent from 34,019 in 1998 to 34,645 in 1999. Although the number of commercial operators fell by 5 percent to 727 in 1999, they sold 288.5 million litres of milk and cream, one percent more than in 1998. The productivity of Manitoba dairy cows has increased significantly since 1977, when 3.1 kl of milk and cream were sold per cow per year compared to 5.8 kl per cow (8.3 kl per cow under quota) in 1999. Farm cash receipts from milk and cream sold in 1999 amounted to \$155.4 million, 4 percent of the total farm cash receipts for the province. About 42 percent of dairy cash receipts came from sales of milk for fluid use, about 56 percent were from sales for industrial milk use, 0.1 percent from industrial cream sales and the remaining 2.0 percent were supplementary payments to dairy producers.

Dairy Processing:

Manitoba's dairy processing industry comprised three fluid milk plants, eleven industrial plants and three repackaging plants for cheese and milk powder with a total of about 490 employees in 1999. Another 400 employees were involved in the distribution of dairy products. The fluid milk plants were Lucerne Foods Ltd. and Parmalat Dairy and Bakery Inc, both in Winnipeg, and Dairyworld Foods in Brandon. Manitoba had six cheese plants located in Grunthal (Medo-Land Dairy Products), Holland (Trappist Cistercian Abbey), New Bothwell (Bothwell Co-operative Dairy Society Ltd.), Souris (Saputo Foods Ltd.), Winkler (Armstrong Cheese Company Ltd.) and Winnipeg (Lucerne Foods Ltd.). There were two ice cream plants, Schwan's Canada Ltd. in Neepawa and Lucerne Foods Ltd. in Winnipeg, a creamery/powdered milk plant, Parmalat Foods Inc., at St. Claude, a creamery, Notre Dame Creamery Ltd., at Notre Dame and a multi-product dairy, Rockwood Agribusiness. The repackaging plants were located in Winnipeg. There were also two research and development facilities licensed to process dairy products, the University of Manitoba in Winnipeg and the Food Development Centre in Portage la Prairie. Dairy products produced in the province, which were valued at over \$300 million in 1999, included fluid milk (97.9 Ml), cream (2.8 Ml), butter, ice-cream, Cheddar cheese (7.1 kt), variety cheeses (6.2 kt), cottage cheese and yogurt. Milk production in 1999 increased by two percent from the 1998 level, the production of Cheddar cheese declined by 10 percent, while variety cheese production increased by 15 percent.

Trade:

Small quantities of milk and cream products, cheese and whey were imported from countries such as the United States, Denmark, New Zealand and the Netherlands in 1999, while Manitoba exported skim milk powder and cheese to Mexico and the United States. Dairy products are used in further processed products, which are exported to other provinces or countries. About one fifth of the butter produced is exported in products such as cookies. Manitoba also imports products derived from milk, such as casein and milk albumin.

Potential:

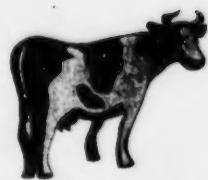

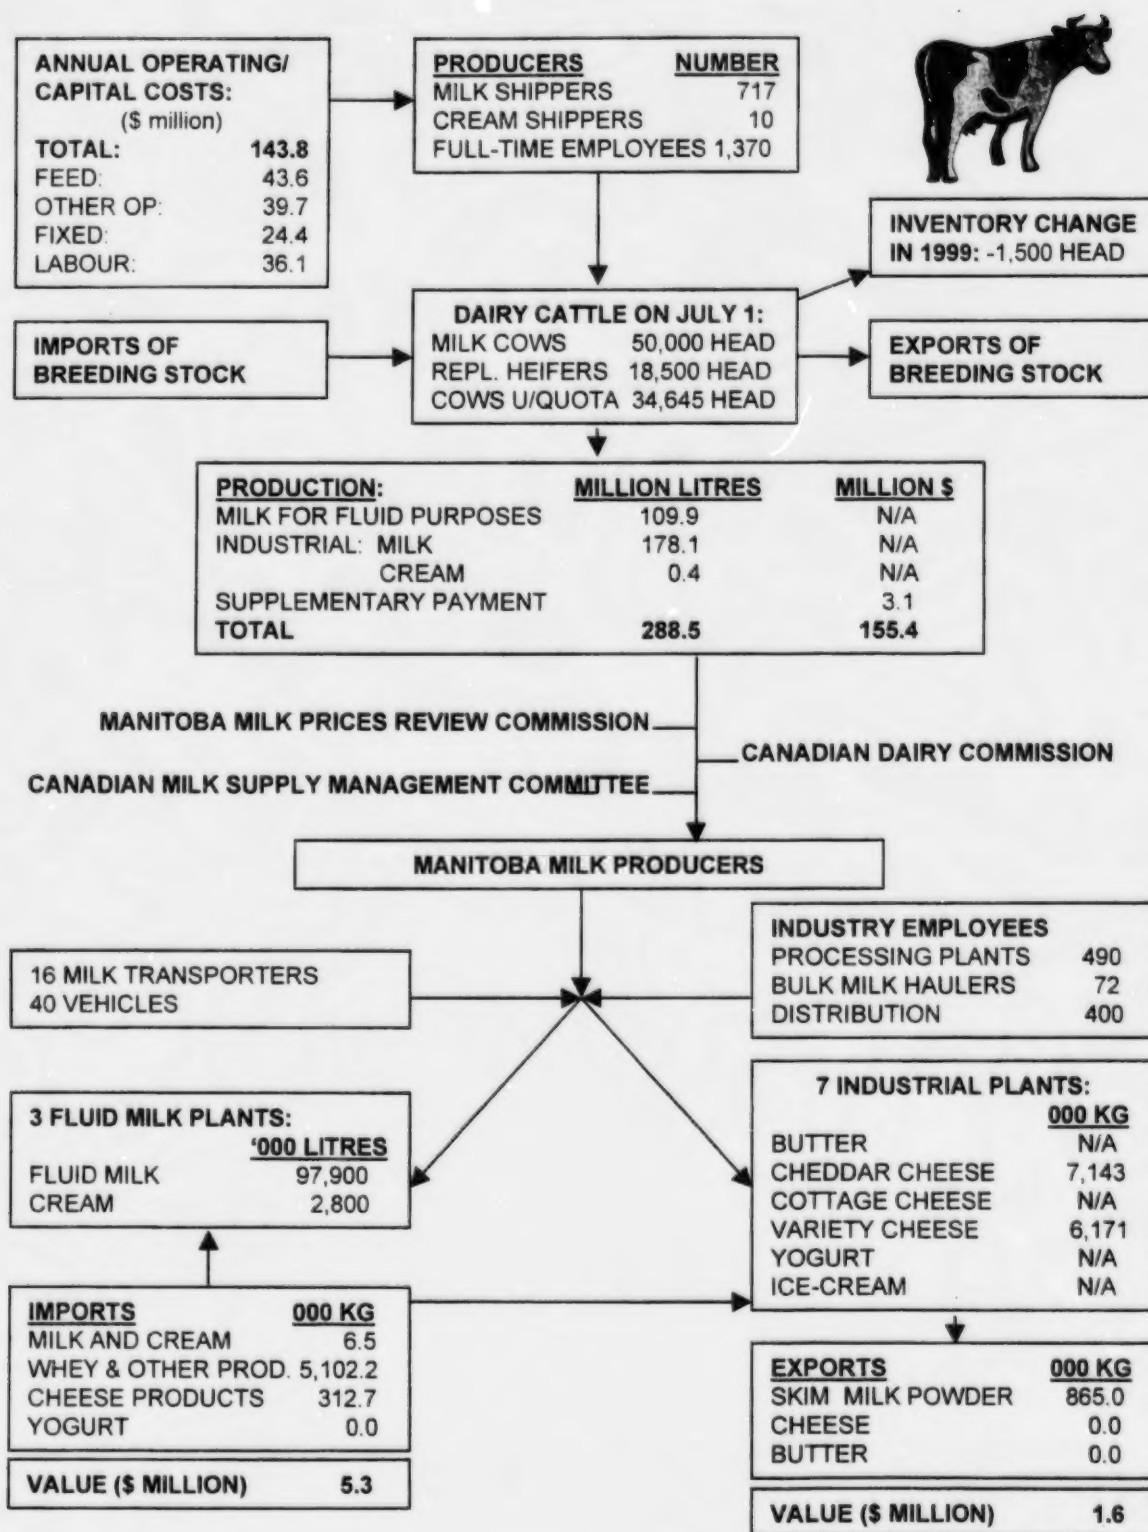

Under supply management, the production of milk for domestic use and traditional export markets is controlled by quota allocations. However, new markets for various types of cheese and other dairy products for export and import replacement are available. Since August 1, 1995, processors who want to access these markets have been able to obtain contracts to purchase milk at world competitive prices to enable them to compete on world markets.

HORSE SECTOR

HORSE SECTOR PROFILE

Production:

Manitoba has a suitable resource base for horse production in terms of land, water, feed and labour. As a result, Manitoba's equine industry is the third largest in Canada with approximately 4,120 farms and 65,000 horses, about 15 percent of the horses in Canada. Manitoba has Canada's largest herd of mares used for pregnant mare's urine (PMU) collection. For the 1999-2000 season, 254 PMU ranches had 24,985 mares of which 17,827 mares were in production, a decrease of five farms, and 2,537 production mares from the previous season. There are also a large number of pleasure horse owners in Manitoba, who had about 10,000 horses in 1999, as well as a much smaller number of racehorse owners, who had about 900 horses.

Marketings:

The Brandon location of Ayerst Organics Ltd., the sole purchaser and processor of pregnant mare's urine in North America, has allowed Manitoba to develop a viable equine industry over the past thirty-three years. Foals are produced as part of the PMU operation and these are kept as replacement mares or marketed for breeding stock, for the pleasure industry, for rodeo events or as ranch stock. Horse sales were valued at over \$19 million in 1999. About 40 percent of the foals are sold to finishing enterprises, less than half of these being marketed by public auction.

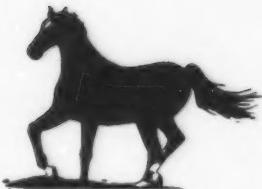

Some of the colts fed in Manitoba feedlots are sold to Bouvry Exports Ltd. of Fort McLeod, Alberta, the remainder going to plants in the United States and Ontario. Only five horses were processed in Manitoba provincially-inspected plants in 1999. Very little horse meat is consumed in Canada. Most of the horse meat produced in Alberta is exported (12,510 tonnes valued at \$62.5 million in 1998) to 11 countries including France, Japan and Italy.

PMU Sales:

The Manitoba PMU industry contributes about \$35-45 million in farm cash receipts each year. For calendar year 1999, the farm value of pregnant mare's urine totalled \$40.7 million or over one percent of total value of production in the province. The urine is used for Premarin production.

Trade:

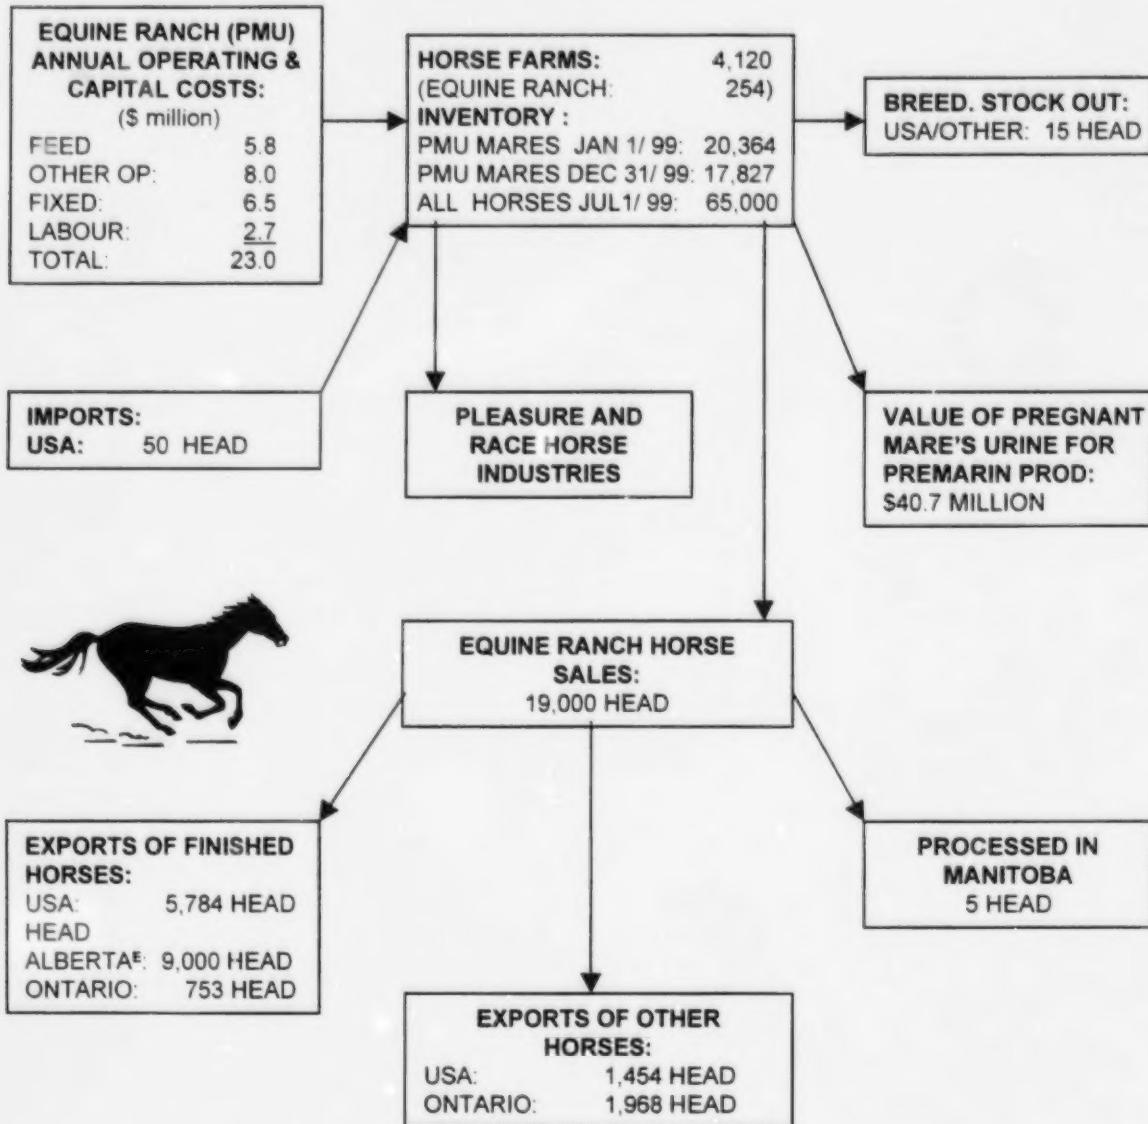

Manitoba exported 7,253 horses to the United States and other locations including the Czech Republic in 1999, of which 15 were pure-bred stock. This was a 9.1 percent decrease from the 1998 level. There were 50 pure-bred breeding horses imported from the United States in 1999.

BISON SECTOR

BISON SECTOR PROFILE

Production:

Although much smaller than the cattle and hog industries, Manitoba's bison industry is the third largest in Canada, producing about 12 percent of national bison production annually and approximately three percent of total North American production in 1999. Bison are indigenous to the Prairies and adapt well to most geographic areas of Manitoba. The number of bison in Manitoba has been increasing by an average of 14 percent annually over the past four years and is likely to expand further.

In 1999, Manitoba's 180 operators had a breeding herd of about 6,000 head, which produced an estimated 4,700 calves. There were 2,000 feeder bulls being finished on a grain/roughage ration in 1999, some of which were originally brought in from Western Canada. The total number of bison on Manitoba farms in 1999 was about 11,000 head.

The value of bison produced in 1999 was close to \$12 million, almost 0.4 percent of the total value of agricultural production in the province.

Marketings and Exports:

In 1999, over 500 bison were brought into Manitoba from the United States, Ontario, Saskatchewan and Alberta. Some of these animals were feeder bulls, which were finished and exported to the North American Bison Co-operative plant for prices averaging US\$2.23/lb (carcass weight). Breeding stock sales to the United States, Ontario, Quebec, Alberta and Saskatchewan increased by eight percent to more than 360 head in 1999.

Bison Slaughter:

There were 55 bison slaughtered in Manitoba provincially-inspected plants in 1999, 90 percent higher than the 1998 level. Most of the bison meat consumed in Manitoba is in restaurants.

Potential:

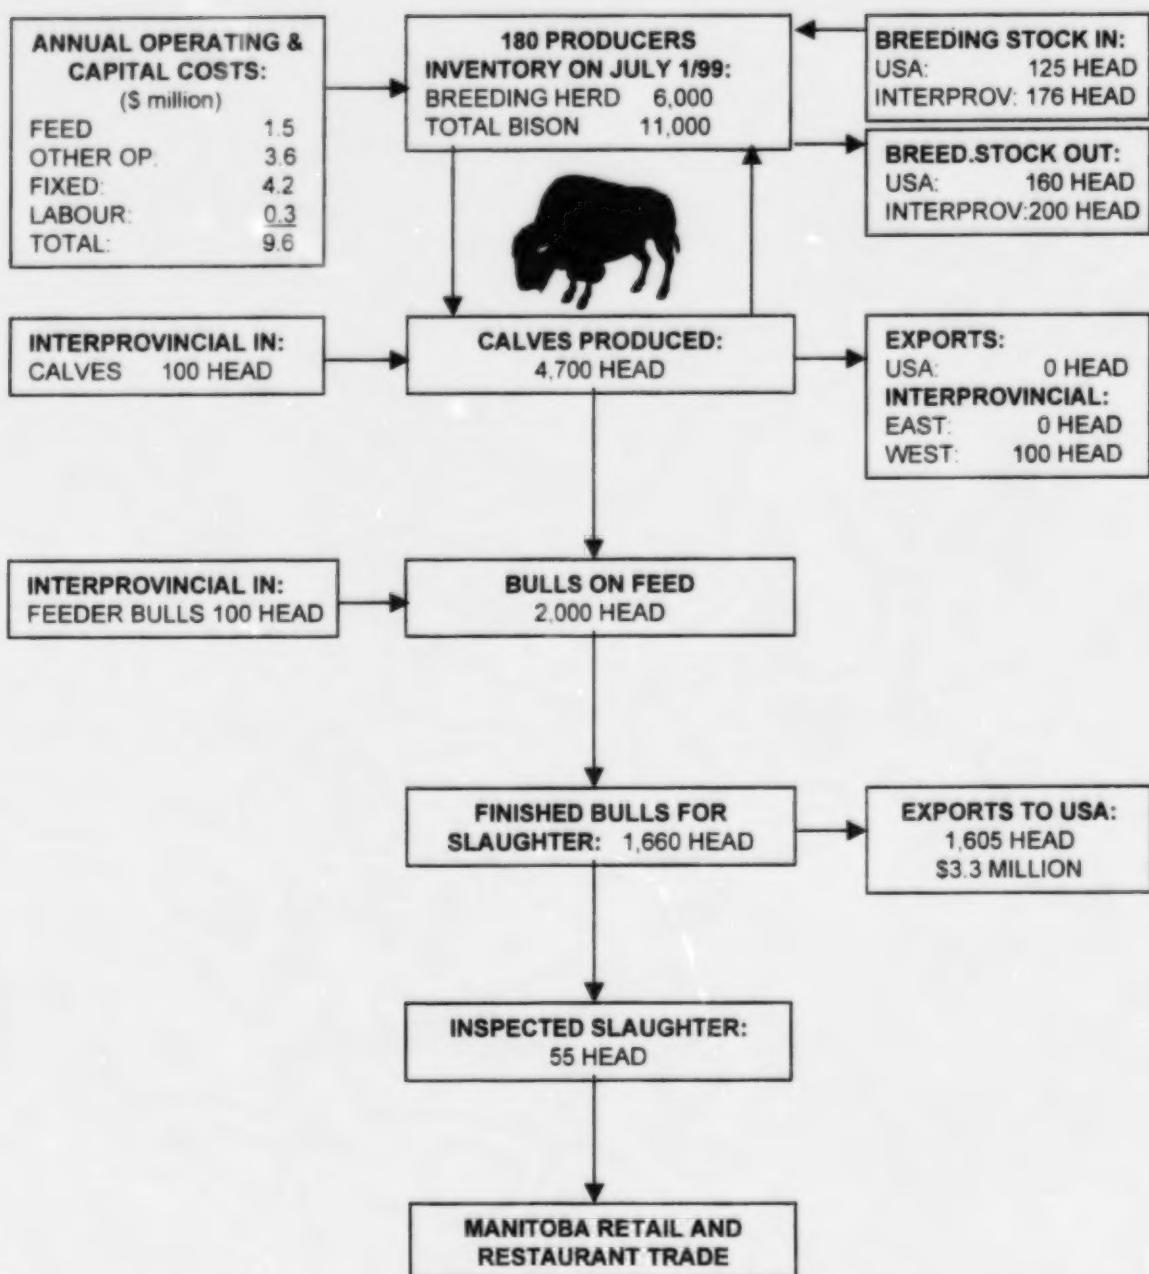

Manitoba has the potential to continue to increase bison production and processing to supply international and domestic markets. Producers continue to improve management skills and lower production costs.

GOAT SECTOR

GOAT SECTOR PROFILE

Production:

The Manitoba goat industry is comprised of two main sectors, meat and dairy, as well as smaller sectors, such as those for wool and pets. Manitoba dairy goats are derived from the European breeds, while meat goats are mostly the Boer goat breed. The main "wool" goat breed is the Angora goat, which produces mohair. There are few Angora goats in Manitoba.

Although much smaller than the cattle and hog industries, Manitoba's meat goat industry is the sixth largest in Canada, producing about five-six percent of national goat production annually and over 0.3 percent of total North American meat goat production. Meat goat production in Manitoba increased fairly steadily from 1986 to 1996, but has expanded significantly in the past three years, partly due to the current period of profitable prices.

In mid-May, 1996, according to Statistics Canada's Census of Agriculture, Manitoba's 515 operators had 7,213 goats on farms, an increase of 22 percent from the 1991 level. Of these, one major producer and two smaller producers had about 550 dairy goats. Only one dairy goat operation remained in 1999. There were approximately 450 milking goats on the one farm. About 650 meat goat producers had an estimated 11,000 goats on July 1, 1999, an increase of ten percent from 1998. Meat goat production was valued at about \$1.1 million in 1999, a rise of 183 percent from 1998, while goat dairy products were estimated at \$0.2 million.

Marketings, Slaughter and Exports:

Meat goats are marketed through Manitoba auction markets, slaughtered in provincially-inspected plants in Manitoba on a custom-kill basis or for the retail and restaurant markets, custom killed on farms, mainly for/by the ethnic trade, shipped to Eastern Canada or sold as breeding stock to countries, such as the United States.

Provincially-inspected plants in Manitoba killed 224 goats in 1999, a decrease of five percent from 1998. About 4,000 goats were slaughtered on farms for/by customers.

In 1999, 4,000 goats were shipped to Ontario and Quebec for breeding stock or slaughter, up from 3,293 in 1998. In addition, about 1,000 Manitoba breeding goats were sold to Alberta and Saskatchewan and 120 breeding goats, valued at \$63,514, were exported to the United States and Mexico.

An estimated 200,000 litres of goat milk was pasteurized and sold as fluid milk to retail outlets in the Prairie provinces and Northern Ontario or processed into cheese, such as feta cheese.

Potential:

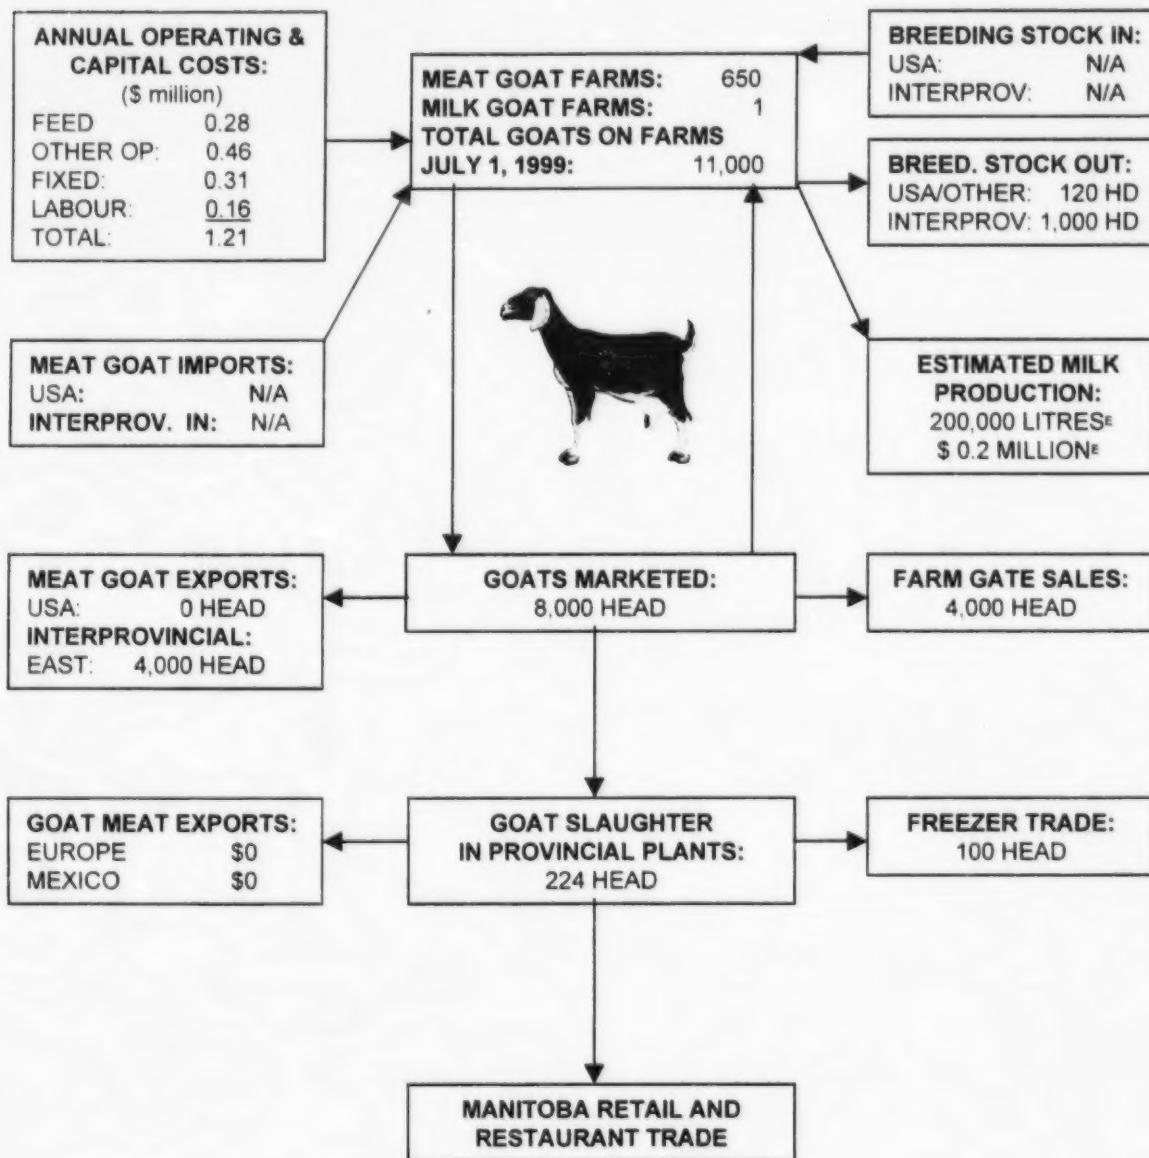

Manitoba has the potential to continue to increase goat production to supply meat to domestic markets, particularly for the ethnic trade, as the product is competitive with other meats. There is potential for increasing breeding stock sales to the U.S. and Mexico. Export markets for meat and hides, particularly in Mexico and Europe, have potential in the future.
